

State-of-the-art cybersecurity solutions delivered by the world's top cyber experts

The fast and efficient way to gain the cybersecurity coverage you need

Cytek is part of the YNV Group – providing cybersecurity services across 6 brands and their clients around the world.

150+

dedicated security engineers covering implementation and response globally

24/7/365

SecOps covering the operations of the YNV Group and its constituent brands

50+

premium support specialists based in Costa Rica and Bulgaria

6,000

protecting 6,000 employees globally across YNV Group's diverse operations

14,000+

security cases closed in 2022 alone

Global CSIRT

designed, built, and managed to unify brand operations on behalf of the YNV Group

Financial losses. Reputational damage. Regulatory fines...

...the list of negative consequences from a cyber-attack goes on and on. And any type of organization can fall victim to hacking or data loss simply due to the lack of employee awareness, use of legacy systems or vulnerabilities in the supply chain. In a constantly shifting cybersecurity landscape, staying on top of the latest threats with an in-house team isn't easy.

Many organizations find it hard to attract or retain skilled cybersecurity professionals. Some lack the means to identify and respond to increasingly sophisticated cyber-attacks. Others want to boost cybersecurity coverage, but resources cannot be diverted from core activities. In short, many organizations look to boost cybersecurity with minimal impact on the bottom line.

Helping organizations overcome cybersecurity challenges

It might be that you only need certain skills on an ad-hoc basis. Or it could be that you want to quickly build up a visibility and response capability in a key location where cyber skills are in short supply.

We don't just address these challenges through technology. Whatever your cybersecurity (and business) requirements, our expert consultants start with a practical analysis of where you are now, where you need to get to, and any gaps that exist.

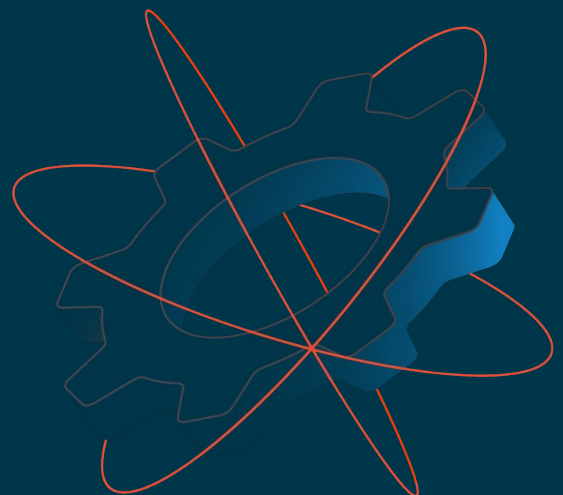

We then customize our **Advisory & Implementation, Managed Security Services**, and **Cybersecurity Capability Building Services** to meet the needs of your organization, providing in depth defense in the most effective and cost-effective way possible - in your home location or anywhere around the world.

Cytek Advisory & Implementation

Our **expert** team identifies clear ways to improve your cybersecurity posture and will design an **implementation** roadmap to help you fill any gaps as quickly as possible.

With Cytek, you can rely on top-notch experts for advice and external design resources. Our field proven cyber professionals help you incorporate best practices and unique knowledge into your organization – accelerating the time to impact for a healthy, self-sustained security posture.

See how we can improve your security posture:

Governance, Risk & Compliance (GRC)

Our team will advise you on how to keep your operations compliant with relevant regulations, standards, and industry best practices. Our GRC experts will help you minimize operational risks while optimizing performance.

Secure Architecture And Security Control Improvement

We'll provide you with a blueprint for creating a secure environment for any core system or network that supports your strategic business objectives. Each action plan will also cover your chosen cybersecurity architecture - whether that's hybrid, on-premise, or in the cloud.

Penetration Testing

Our team will scope your needs and create a test plan based on your risk priorities. Cytek can perform either ongoing or ad-hoc testing, provide clear reporting, and post-testing support, to ensure your environment is secure from attack.

Commercial SOC/CSIRT Implementation

We'll put together a specialist team and design and implement a dedicated Security Operations Center (SOC) or Computer Security Incident Response Team (CSIRT). We'll provide you with the technology, procedures, and skills that will allow your organization to be self sufficient, and only leverage our advisory services when needed. With your own SOC or CSIRT in place, you can increase visibility of your security posture and better respond faster to threats through root cause analysis, reinforced security controls, and mechanisms for swiftly returning to normal operations.

Cytek Managed Security Services

Our **Managed Security Services for 24/7 protection** keep your organization safe in the face of multiple and ever-changing cyber threats.

As a single source for expert and rapidly scalable cybersecurity services, Cytek offers instant peace of mind while saving the time it takes to build out new in-house capabilities.

See how we'll keep you protected at all times:

Monitoring And Investigations

Rely on our SOC to provide real-time monitoring, detection, and correlation of data and alerts across your network. We'll cover all users, endpoints, security controls, network and infrastructure with custom 'eyes on the glass', afterhours, or 24/7/365 coverage depending on the resources you need to reduce the burden on your in-house team.

Incident Response

We'll give you access to a highly capable on-demand cybersecurity team that's ready to respond if a *force majeure* cyber incident comes into effect. That way, your team will have the support it needs to implement an instant and effective response and return to normal operations as quickly as possible.

SecOps

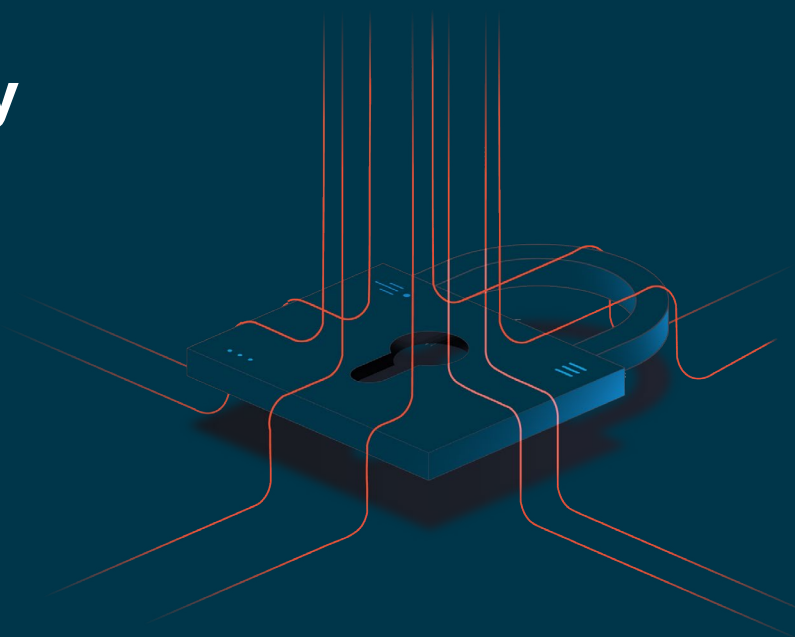

Our security and IT operations specialists are in place to offer 24/7/365 certified maintenance and support for the security controls deployed within your network(s). With the in-built flexibility to scale up or down as you need, we can also provide coverage across different time zones to avoid the issues with attracting and retaining the right skills.

Cytek Cybersecurity Capability Building

Our Cybersecurity Capacity Building practice helps you address the most acute challenge in today's cybersecurity: The human factor.

We will help you keep your organization safe by systematically developing self-sustained cyber awareness and knowledge and an organization-wide cybersecurity DNA.

See how we'll build your cyber security capabilities:

Cyber Training And Awareness Programs

We'll help you address the most acute cybersecurity challenge - the human factor. Tailored employee learning programs rapidly improve your team's cybersecurity knowledge, increase recognition of threats, and establish effective ways of responding to attacks. We provide programs for awareness, beginners, intermediate, and advanced levels.

Tech Stack And Infrastructure

Our experts will ensure you build your infrastructure right from the start. We will set up cyber simulators, cyber ranges and labs so your team can gain hands-on experience in secure environments. Your team will benefit from access to ready-to-use threat intelligence, forensics and AI analysis capabilities.

Methodology

We'll help you stay on top of your organization's security posture with maturity assessments, tabletop and hands on simulations and exercises. We'll help you build blue vs. red teams and support your recruitment efforts with personnel screening.

Global coverage

Our 24/7/365, follow-the-sun operations provide certified cybersecurity design, monitoring, and response services for organizations around the world.
